

Jean Paul Augusto Flores Auquimayta

Full-Stack Software Engineer

Cusco, Peru | contact@jeanpaulflores.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Professional Summary

Full-Stack Software Engineer with experience building SaaS platforms, CMS solutions, and scalable web applications used in production environments.

Specialized in TypeScript, Next.js, NestJS, and PostgreSQL, with hands-on experience designing distributed systems, asynchronous processing pipelines, and cloud-based infrastructures.

Proven ability to modernize legacy applications, improve developer experience through architectural initiatives, and deliver products from concept to production. Passionate about software architecture, product development, and building maintainable solutions that solve real business problems.

Selected Achievements

- Led the progressive TypeScript adoption of a large legacy React and Redux codebase while maintaining production compatibility.
- Contributed to the migration from React 16 to React 18, modernizing dependencies and improving maintainability across multiple applications.
- Designed, developed and deployed a production-ready multi-tenant SaaS platform from concept to launch.

Core Technologies

Frontend: React, Next.js, TypeScript, Redux, Tailwind CSS, Shadcn UI

Backend: Node.js, NestJS, REST APIs

Databases: PostgreSQL, Prisma ORM, SQL Server, Oracle

Cloud & Infrastructure: Docker, Redis, BullMQ, Cloudflare R2, Google Cloud, Linux VPS

Architecture: SaaS Platforms, Multi-Tenant Systems, Distributed Processing, CMS Platforms, Asynchronous Workflows

Professional Experience

TREMGroup — Front-End Developer

Jan 2023 – Present

- Designed and implemented a contextual visual editing system for a real estate CMS used by clients across the United States, enabling direct content editing within page previews.
- Developed reusable editing architectures that unified sidebar and modal-based workflows, reducing duplicated configuration logic, and improving maintainability.
- Led the progressive adoption of TypeScript in a large legacy React and Redux codebase, establishing compatibility between JavaScript and TypeScript while improving the developer experience.
- Participated in the migration from React 16 to React 18, updating critical dependencies, replacing deprecated libraries, and resolving compatibility issues across multiple applications.
- Developed a grid-based visual builder with drag-and-drop capabilities, providing greater flexibility for page creation and reducing dependency on rigid predefined layouts.
- Contributed to ongoing modernization efforts through refactoring, state management improvements, and reduction of prop-drilling patterns across the platform.

Valtec Consultores — Full Stack Developer

Jan 2022 – Aug 2023

- Developed and maintained business applications using React, .NET, SQL Server and Oracle, contributing to both frontend and backend functionality across multiple client projects.
- Worked on legacy enterprise systems, implementing new features, integrations and database changes while navigating large and complex codebases built with different generations of .NET technologies.
- Designed and implemented highly interactive user interfaces by introducing modern frontend technologies into existing systems, enabling functionality that was difficult to achieve with the original technology stack.
- Contributed to an IoT monitoring platform built on Google Cloud, integrating sensor data pipelines, real-time dashboards, cloud services and visualization tools to monitor environmental metrics such as temperature and air quality.

Killa House Hotel — Front-End Developer

Jul 2016 – Jul 2017

- Redesigned and modernized the company website, improving user experience and performance.
- Developed a custom reservation management solution and automated customer communication workflows.

Llika Inversiones — Front-End Developer

Jun 2015 – Jun 2016

- Developed custom web solutions and booking-related plugins for business clients.
- Created and maintained Drupal themes with a focus on usability and performance.

Featured Projects

Kancha | Founder & Full-Stack Engineer

reservakancha.com

Stack: Next.js, NestJS, PostgreSQL, Prisma, Clerk, Cloudflare R2, Docker

- Designed and developed the platform from concept to production, including product planning, system architecture, implementation and deployment.
- Built a multi-tenant architecture using Next.js, NestJS, PostgreSQL and Prisma, enabling independent management of venues, courts and reservations.
- Implemented onboarding workflows, reservation calendars, facility management modules and public venue profiles to support both business owners and end customers.
- Integrated Clerk for authentication and Cloudflare R2 for media storage, providing secure access management and scalable asset handling.
- Deployed and maintained the production environment using Docker containers on a Linux VPS, managing frontend, backend and database services.

VideoOptima | Distributed Video Processing Platform

<https://videooptima.jeanpaulflores.com>

Stack: Next.js, NestJS, PostgreSQL, Prisma ORM, Redis, BullMQ, FFmpeg, Cloudflare R2, Docker, Linux VPS.

- Designed and implemented a microservices-based architecture separating API and processing responsibilities through dedicated worker services.
- Built an asynchronous processing pipeline using Redis and BullMQ to manage video jobs, retries and task distribution.
- Integrated FFmpeg for video compression, format conversion, trimming and thumbnail generation, executing processing workloads within Dockerized environments.
- Implemented secure upload and delivery workflows using signed URLs and Cloudflare R2 object storage, reducing infrastructure costs while maintaining scalability.
- Deployed the platform using containerized services including Next.js, NestJS API, NestJS Worker, PostgreSQL and Redis running on a Linux VPS.

Education

Universidad Andina del Cusco

2010 – 2016

Bachelor's Degree in Systems Engineering

Languages

Spanish — Native

English — Upper Intermediate (B2)
