Jean Paul Flores Auquimayta

Full-Stack Developer | React, Next.js, TypeScript and Node.js

Cusco, Peru | Remote work | contact@jeanpaulflores.com
LinkedIn | GitHub | jeanpaulflores.com

Professional Summary

Full-stack developer with a strong frontend focus and professional experience in React applications, real estate CMS platforms, and enterprise systems built with .NET. I build independent products with Next.js, NestJS, and PostgreSQL, from defining requirements through deployment. Experienced in modernizing existing codebases, building visual editing interfaces, resolving bugs, and contributing to production releases.

Core Technologies

Frontend: JavaScript, TypeScript, React, Next.js, Redux, Tailwind CSS.
Backend and Data: Node.js, NestJS, .NET, REST APIs, PostgreSQL, Prisma, SQL Server, Oracle.
Infrastructure and Tools: Docker, Linux, Google Cloud, Cloudflare R2, Redis, BullMQ, Git, Sentry.
Practices: working with CI/CD pipelines, release validation, and production error tracking.

Professional Experience

TREMGroup — Frontend Developer *Jan 2023 – Present*
Remote | React, Next.js, TypeScript, Redux, Sentry

- Designed and implemented a contextual visual editing system for a real estate CMS used by clients in the United States, enabling content updates directly within page previews.
- Developed reusable components and configurations for sidebar and modal editing, reducing duplication across both workflows.
- Drove the progressive adoption of TypeScript in a React and Redux codebase, maintaining JavaScript interoperability and application compatibility.
- Built a grid-based visual builder with drag-and-drop functionality and contributed to React and dependency upgrades, resolving compatibility issues.
- Participate in release validation in a pre-production environment and error tracking with Sentry, within a branch-based automated deployment workflow.

Valtec Consultores — Full-Stack Developer *Jan 2022 – Aug 2023*
Remote | Initially full-time; later project-based

- Developed and maintained frontend and backend features in enterprise applications using React, .NET, SQL Server, and Oracle.
- Implemented integrations and database changes in existing systems built with different generations of .NET technologies.
- Contributed to an IoT platform on Google Cloud, integrating sensor data and dashboards to visualize environmental metrics.

Killa House Hotel — Frontend Developer *Jul 2016 – Jul 2017*

- Redesigned the website and built a reservation management solution with automated customer communications.

Llika Inversiones — Frontend Developer *Jun 2015 – Jun 2016*

- Developed websites, Drupal themes, and booking-related plugins for business clients.

Independent Projects

Kancha — Sports Facility Management Platform
reservakancha.com
Next.js, NestJS, PostgreSQL, Prisma, Clerk, Cloudflare R2, Docker

- Designed, developed, and launched a platform for managing venues, courts, and reservations, with owner onboarding and public venue profiles for players.
- Implemented the data model, APIs, and administration workflows, including booking calendars, operating schedules, and pricing rules.
- Integrated Clerk authentication and Cloudflare R2 image storage; deployed the frontend, backend, and database using Docker on a Linux VPS.

VideoOptima — Video Processing Platform
videooptima.jeanpaulflores.com
Next.js, NestJS, PostgreSQL, Redis, BullMQ, FFmpeg, Cloudflare R2, Docker

- Separated the API from video processing through a dedicated worker and a Redis/BullMQ job queue with retry handling.
- Integrated FFmpeg for compression, format conversion, trimming, and thumbnail generation within Docker containers.
- Implemented file upload and delivery using signed URLs and Cloudflare R2, and deployed the services on a Linux VPS.

Education

Universidad Andina del Cusco *2010 – 2016*
Bachelor's Degree in Systems Engineering.

Additional Training

Courses in software testing with Jest and Cypress.

Languages

Spanish: Native.
English: Upper-intermediate — B2.
